

Chapter 4 Exercises

1. Create an app that lets the user enter the number of miles he or she has driven and the gallons of gas used. The app will calculate and display the car's MPG. The app should also display the message that is an efficient auto if the MPG is greater than 32.
2. Modify the Wages app that you created in chapter 4 in such a way that when the user works overtime, the app also displays the number of overtime hours worked, the amount of regular pay, and the amount of overtime pay.
3. Modify the Pizza app that you created in chapter 4 so that the user can also choose to add their favorite toppings (at least 2) and a choice of drink.
