Chapter 8 Projects

1. Daily Special

Write an application that allows a restaurant manager to enter the seven daily specials and store the information into a TinyDB using the day of the week as the tag and the special entered on the screen as the value. Provide a search underneath the entry portion that will allow the user to enter the day of the week in a textbox, click a button, and see the special for that day.

See Practice: Storing and Retrieving Values for help.
