

Android Studio Testing and Debugging Steps to try.

Step 1: Tools—Android—Sync Project with Gradle Files

Step 2: Build--Clean Project

Step 3: Build—Rebuild Project

Step 4: File—Invalidate Caches/Restart

Step 5: Run your App frequently

Step 6: Name your file and component correctly to avoid compilation errors.

Step 7: Create Multiple AVDs with Different APIs and Different Images.

But most importantly, pay attention to what you are doing
