

THINKING ALGEBRAICALLY

Calculate the gain or loss for each stock and record your answer in the third column under Change in Price. In the fourth column, write whether the change in price is a gain or loss.

Price Bought	Price Sold	Change in Price	Gain or Loss
\$36.13	\$37.01		
\$12.42	\$12.27		
\$58.43	\$53.48		
\$ 5.39	\$ 6.02		
\$44.95	\$45.99		
\$29.83	\$28.75		
\$ 9.48	\$15.02		
\$22.58	\$22.59		

How do you know when the change in price is a gain or loss?

Multiply the Number of Shares by the Price Per Share to calculate the Total Cost of Shares.

Example: 500 shares x \$22.40 per share = \$11,200.00

Number of Shares	Price Per Share	Total Cost of Shares
500	\$22.40	
360	\$12.70	
70	\$95.50	
740	\$41.00	
85	\$31.00	
1050	\$34.00
