2002	1.20	1.28	0.77	0.73	1.20	1.14	1.65	1.71

NOTE: This ratio is most useful when compared with 1.0. For example, the ratio of 1.65 for males in 2002 whose highest education level was a bachelor’s or higher degree indicates that they earned 65 percent more than males who had a high school diploma or GED. The ratio of 0.73 for females in 2002 whose highest education level was grades 9–11 indicates that they earned 27 percent less than females who had a high school diploma or GED. The Current Population Survey (CPS) questions used to obtain educational attainment were changed in 1992. In 1994, the survey methodology for the CPS was changed and weights were adjusted.
