

Object Oriented Programming

Create a new Java Project called “**Object Oriented Programming**”. Inside your new Project, create a new Class and copy the following program. Run the program and observe the results. Did the program run?

Next go back to your Main Class and run the Main class program.

```
public class House {  
    long propertyNumber;  
    String propertyType;  
    byte Stories;  
    public int Bedrooms;  
    double MarketValue;  
}
```
