

Pizza Order Result Refresh Record Code

In order to refresh our table of data after we delete an item, we need to add a refresh code. First, find the following Highlighted line of code in your Results Code. Next, copy the code below after the highlighted line. (Do Not copy the highlighted line again)

```
Connection connection = null;
```

```
public void refreshTable()
{
    try {
        String query = "select * from OrderForm";
        PreparedStatement pst =
connection.prepareStatement(query);
        ResultSet rs = pst.executeQuery();

        table.setModel(DbUtils.resultSetToTableModel(rs))
;

    } catch (Exception e) {
        e.printStackTrace();
    }
}
```
