

Menu Order Form

First, create the following Form using the correct variables (see below). Next, create the necessary code to make the form work. Start with a JFrame. Your JFrame should be about 600 x 400. `setBounds(100, 100, 600, 400)`

The screenshot shows a Java Swing window titled "Menu" with a standard Mac OS-style title bar (minimize, maximize, close buttons). The window contains a form with the following elements:

- A text field labeled "Name".
- A section for "Entree Type:" with three radio buttons: "Burrito", "Bowl", and "Taco".
- A section for "Meats" with three radio buttons: "Chicken", "Steak", and "Shrimp".
- A section for "Extras" with three checkboxes: "Mild", "Medium", and "Hot".
- A text field labeled "Special Instructions".
- A large green rectangular area labeled "Your Order Info".
- Three buttons at the bottom: "Exit", "Reset", and "Submit".

Use the following variables:

- txtName
- radioBurrito
- radioBowl
- radioTaco
- radioChicken
- radioSteak
- radioShrimp
- checkMild
- checkMedium
- checkHot
- txtInstructions
- btnSubmit
- btnReset
- btnExit
- textPaneOrder
