

## Oracle 5-1. Planet Weight Help

Use the following to get started:

```
double weight;//Your weight on Earth  
double newWeight;//Calculated weight on other planets  
double conversion;//Conversion rate (hint. Use a multiplication)  
int choice;// The planet you choose  
String planet;//The name of the planet as shown in the Print Statement.
```

```
weight=reader.nextDouble();//Input for your weight
```

```
choice=reader.nextInt();//Input for your choice of planet
```

Below is a beginning If-Else Statement to get you started:

(There are several If-Else statements)

```
if(choice==1)  
{  
    planet="Mercury";  
    conversion=.38;  
}else if(choice==2)  
{
```
