

Array List – Complete the code by changing the highlighted words

```
import java.util.ArrayList;
public class ArrayListBooks {
    public static void main(String args[]) {
        ArrayList books = new ArrayList();

        change.add("Java Book1");
        change.add("Java Book2");
        change.add("Java Book3");
        change.add("Java Book4");

        // delete the book in Index (0)
        books.change (2);

        //Print the whole list
        System.out.println("The books stored in this Array List are: "+ change);

        //Print Index 3
        System.out.println("The book stored in Array Index 3 is: "+books.change(3));
    }
}
```
