

Scanner Practice

Scanner Practice

```
import java.util.Scanner;  
public class ScannerVariables {
```

```
    public static void main(String[] args) {  
        Scanner user_input = new Scanner( System.in );
```

```
        String first_name;  
        System.out.print("Enter your first name: ");  
        first_name = user_input.next( );
```

```
        String family_name;  
        System.out.print("Enter your family name: ");  
        family_name = user_input.next( );
```

```
        String full_name;  
        full_name = first_name + " " + family_name;
```

```
        System.out.println("You are " + full_name);
```

```
    }  
}
```
